

Wax Worm Care guide

Feeding:

Wax Worms will not be fed. Therefore it is important that you only buy what you need. These are meant to be a treat. NOT A PRIMARY FOOD SOURCE.

Housing:

They need dry sawdust and low humidity. If too much moisture gets in, it may cause mold.

Water:

They do not require a water source. See below for details.

Temperature and humidity:

After your wax worms arrive, place them on the door of your fridge and take out what you need daily. Waxworms in your fridge can last up to 2 weeks in most cases
